ADITYA SONI

Backend Engineer | Node.js · NestJS · Distributed Systems

Jaipur, India | +91 7023307413 | imadityasoni02@gmail.com | linkedin.com/adityasoni02 | github.com/ADITYASONI002

SUMMARY

Backend engineer with 3+ years building fault-tolerant, high-throughput systems in fintech. Specializes in Node.js/NestJS microservices, distributed transactions, and messaging architectures (RabbitMQ, Redis) that process hundreds of thousands of transactions and messages daily. Track record of measurable impact: 95% API latency reduction, 100% isolation across multi-tenant financial data, 98% reduction in manual compliance work.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript

Backend: Node.js, NestJS, Express.js, REST APIs, gRPC

Frontend: Angular, HTML, CSS

Databases: PostgreSQL, SQL

Architecture: Microservices, Distributed Transactions, Multi-Tenancy, Monorepo, SOLID, OOP

Messaging & Caching: RabbitMQ, Bull (job queues), Redis (caching, rate limiting)

Cloud & DevOps: AWS (EC2, S3), Docker, Git, GitHub, SSH, Postman

WORK EXPERIENCE

Software Engineer — AKEO | *India* | *Sept 2023 – Present*

- Architected a distributed workflow using Bull queues and compensating transactions, eliminating 100+ daily pricing inconsistencies and ensuring fault-tolerant data consistency across services.
- Delivered a multi-tenant accounting module supporting branches, ledgers, journal entries, and financial reporting with consistent transactional data and 100% isolation.
- Engineered a configurable fee and invoicing service managing 1,000+ subscriptions, charges, and month-end billing cycles, integrated with regulatory compliance platforms.
- Automated compliance and operational reporting via scheduled background jobs, eliminating 98% of manual monthly preparation.
- Optimized critical balance and reporting APIs by restructuring SQL queries and applying targeted indexing — achieving 95% improvement in response performance.
- Migrated a legacy codebase to a modern NestJS framework, reducing code complexity by 30% and improving developer productivity with minimal service disruption.

PROJECTS

Centralized API Gateway & Rate Limiting Service | *NestJS · JWT · Redis · API-Key Auth · Rate Limiting*

- Implemented a unified API gateway in NestJS handling authentication, rate limiting, request validation, and downstream routing — reducing cross-service redundancy by 60%.
- Enforced dual-layer security (JWT + API-key) blocking 100% of unauthorized traffic before reaching internal services.
- Applied per-IP and per-user rate limiting via Redis sliding-window counters with HTTP 429 throttling for abuse prevention.
- Consolidated validation, logging, and health checks with fallback handling, improving overall service resilience by 50%.

Real-time Notification Engine | *Node.js · RabbitMQ · SQL · Caching*

- Architected an event-driven multi-channel notification platform using RabbitMQ fan-out exchanges, guaranteeing bulk delivery of 300,000+ messages across SMS, email, and push channels with isolated queues per channel type.
- Enforced end-to-end security for sensitive personal messages (OTPs) via encrypted payloads and dedicated priority queues — ensuring zero cross-tenant data leakage and 100% isolation between bulk and secure pipelines.
- Implemented dead-letter queue handling with exponential backoff retry logic, achieving 98% delivery success rate under downstream failures with full SQL-backed delivery audit logs.

EDUCATION

B.Tech — Computer Science & Engineering, AICE, Jaipur | Sep 2020 – Apr 2024 | CGPA: 8.54 / 10

Senior Secondary (PCM) — Tagore Public School, Gudha Gorji | Jun 2018 – Apr 2019 | 76 / 100
